

Speaker: Dietmar Bohn

Profile

Dietmar Bohn has been the CEO of TDM Systems since 2018 and leads the company with visionary goals and ideas. Throughout his 30-year career, he has gained extensive industry and software experience in the manufacturing industry. Before that, he was at SAP SE for 14 years, in various global management positions along the entire company software value chain, most recently as Vice President in Industry Solution Management. The graduate electrical engineer began his career in 1990, as a control technology developer for Machinery Control Systems at Heidelberger Druckmaschinen AG. Later he was responsible for the IT area in control technology development and then the global implementation of sales and service processes and the required software systems.

Title

- Introduction to the Topic "Innovation through Digital Tool Management"

Focus/ Target Group

- New customers
- Existing customers
- Decision makers (focus on customer benefits)
- Users

Duration

- 30 minutes

Speaker: Dietmar Bohn

Focal Points/ Contents

This presentation will provide an overview on why manufacturing companies invest in digital tool management and how tool management software helps to ensure high productivity, transparent and agile production as well as improving tool logistics and reducing tool-related costs at the same time. Besides, recommendations on how companies can reduce tool-related machine set-ups and downtimes through tool management automation will be introduced.

- Presentation of virtual TDM Weeks
- Digital tool management: Why invest?
- Reduction of machine downtimes: Dietmar Bohn's recommendation
- References: What are successful manufacturing customers doing right?
- Software and customer services from TDM Systems
- Insight: Innovations and new projects
